Discussion topics

	Item	Notes
1	Pair coding	
2	Display notification time	
3	Fix dropdown glitches	
4	Improve the logic of un-subscription	The frontend now only sends an HTTP GET request to `/notification`~~`/connect`~~`/register` once right after login, next store the subscription path in local storage. This will be sent to backend when logout, then deleted.
5	Fix logout problems	
6	Fix merge inconsistency
